

# Our Drinking Water

We all know the make up of water is H<sub>2</sub>O  
What's in water that kills is what we don't know!

We have an abundance of surface water in our state  
And we know it's being polluted at a very fast rate.

Our ground water supply is what most of us use  
Many contaminants we must learn not to abuse  
Keeping them from wellheads would be very good news.

Before you dump waste oil or chemicals on to our soils  
Think where it will wind up and what will be the spoils.

Water is our most precious of all our natural resources.  
Please join us in protecting our drinking water sources.
